

# Art380 Telephone Interface Unit

The Art380 is a self contained telephone interface module for use on an analogue telephone line. Its primary function is to enable a user to communicate with a telephone line and a door entry point (or points) from the same telephone handset. This handset can be a standard corded model, a cordless such as a DECT telephone or even a hands free telephone. The Art380's main features are listed below:-

- Communicate with both a telephone line and door entry points.
- Open a door using the telephone keypad.
- Open the speech to a door entry point without first being called.
- Activate up to two auxiliary outputs. (Outputs can be either momentary or latching).
- Reverse the door open relay for use with power to lock releases.
- Make the following call adjustments in programming mode:-
  - Number of rings (From 1 – 10 rings)
  - Door open time (From 1 – 18 seconds)
  - Door open key (Either 0(default), 8 or 9)
  - Internal/external speech volume.
- Divert the call to another pre-programmed number.
- Program an access code to protect the programming and the use of facilities in either divert mode or normal mode.
- Operate in a hands free mode (Speech automatically adjusts the gain to the direction of speech).
- One way speech mode (Simplex speech)
- PABX mode (Allows the units to operate without the need for a telephone line).
- Dial in facility that allows the Art380 to be activated from an incoming telephone call.
- Serial bus for use with a variety of expansion modules.

## The Art380 is available in the following forms:

- ✓ **Art380** - Stand alone DIN Module.
- ✓ **EK380** - 1 button entry kit with flush door panel.
- ✓ **EK380S** - 1 button entry kit with surface door panel.
- ✓ **SLK-380** - 1 button entry kit with slim line surface door panel.
- ✓ **SMVK-TV-380** - 1 button video surface door panel with Scart interface for video and Art380 for audio
